

Amulet SafeWall™ Patent Pending

WALL-TO-WALL BALLISTIC PROTECTION

Protecting life and assets from an active shooter or blast event is essential to your security plan.

Historically, introducing ballistic protection to walls and doors was expensive and time-consuming due to intensive structural teardowns, costly construction and significant downtime. Until now.

Amulet SafeWall™ is a simple yet elegant solution to safeguard your control rooms, network server rooms, security operations centers or safe rooms. Designed to be applied to existing wall structures during construction or as a retrofit, Amulet SafeWall™ adds a beautiful aesthetic to virtually any environment. But the real beauty is what lies beneath the surface.

At its core, Amulet SafeWall™ provides industry-leading Amulet® Ballistic Barrier protection. This award-winning, environmentally friendly bullet and blast absorbing technology is used to protect life and property in government facilities, schools, hospitals, airports, critical infrastructure, and many other settings.
