

Amulet Intercept™

DETECT, IDENTIFY, ALERT, RESPOND – WITHIN SECONDS

Explore our next-generation emergency ballistic and blast detection/notification system.

Amulet Intercept™ is state-of-the-art energy wave technology that detects gunshots and blasts instantaneously – all without human intervention. It can be used as a stand-alone device, or be integrated with Amulet SafeVest™, SafeWall™ and SafeWrap™ products.

Developed in response to the Sandy Hook tragedy, this award-winning, patented detection technology is like no other in the industry. Amulet Intercept™ captures energy level and waveform analysis to determine firearm discharge or the occurrence of a blast event.

How It Works

Blast or firearm discharge detected - Amulet Intercept™ takes control.

1. Notifies command center and law enforcement
2. Activates emergency response systems (mass notification, lighting, any IoT)
3. Redirects cameras toward event
4. Initiates activation of access control and other response
5. Analyzes ballistic caliber

Features & Benefits

- Autonomous and instantaneous notification of security staff and first responders via text, email and live video stream
- Fully automated response initiated within seconds of shot or blast detection
- Provides GPS location of shooter and ballistic data of weapon being used
- Geofencing capabilities with access control to contain threat
- Integrates with the latest on and off-site facility protection systems - including drones, robotics, long-range acoustic devices (LRAD), and mass communication programs
- Easy to install with capability to put the entire building security under one umbrella: fire, burglar, CCTV, access control, chemical and biological sensors

Emergent Technologies

Amulet continues to innovate. Connect with us to ensure you have the best protection technology in place.
