AMULET MOBILEBOARD™

A Work Tool with the Ability to Protect Life

The mobile markerboard is a tool common to work and school environments. Now, with Amulet® Ballistic Barrier technology hidden inside, it becomes something dramatically better...a life-safety device.

Why utilize a markerboard to protect life during an Active Shooter event? Simple. It is the essence of what we do – deliver state-of-the-art ballistic protection to public environments...invisibly. Protecting life without disturbing it.

Many security experts agree that mobile markerboards are an excellent form factor for the application of ballistic barriers. However, it takes Amulet® Ballistic Barrier technology to turn an ordinary structure into an extra-ordinary one.

The Amulet Mobileboard™ stops and absorbs a full spectrum of ballistics, including those from handgun, rifle and blast. It is uniquely designed to provide complete coverage for better protection should the unthinkable happen.

Features available with the Amulet Mobileboard™ include...

- Panels connect to form a safe space
- Certified to meet NIJ/UL test standards
- Variety of surfaces and finishes available
- Available in various heights and widths
- Easy-roll lockable casters for securing
- Opposing grab-handles optional

Amulet Intercept™ Compatible
AMULET LECTERN

AMULET® BALLISTIC BARRIER PROTECTION
FOR PUBLIC SPEAKERS

Public speaking presents its own challenges, no matter how friendly the audience. There are also those instances where a speaker’s words are met with hostility which has the potential to lead to violence. In these cases, a speaker’s personal safety becomes a priority.

Security experts agree that mitigating a physical threat, especially that from ballistic violence, should include a robust protective element. This is why Amulet® Ballistic Barrier technology is now hidden within beautiful Lectern furniture.

Amulet has teamed with several leading manufacturers who produce some of the world’s most beautiful furniture products. Our newest Lectern series is no exception. While appearing to be both beautiful and functional, it is also a life-safety ‘device’.

Equipped with Amulet® Ballistic Barriers to help protect life from a full spectrum of ballistic threats - handgun, rifle, and blast - this Lectern also functions as intended. Included is a microphone, light, slide out shelf, and slide out step stool. The adjustable shelf allows for easy storage, while the fully finished back panels are hinged to allow for wire access. Hidden casters provide for ease of movement.

Furniture product containing Amulet® Ballistic Barrier technology is viewed as capital equipment and considered a life-safety ‘device’. As such, their purchase may be tax deductible (refer to federal tax guidelines). In addition, federal, state, and local government agencies may be entitled to US Homeland Security Grant Program funds for purchase (USHSGP administered by FEMA).
AMULET OFFICE
BALLISTIC PROTECTION FOR OFFICE DESK & WORKTABLE

The security industry recognizes that Active Shooter events can take place virtually anywhere and at any time. However, they most often occur in places of commerce. This includes the workplace.

That is why Amulet® Ballistic Barriers can be found within interior structures, including commercial furniture, throughout the work environment.

Office Desking systems and Worktables can now help mitigate threats by physically protecting life from ballistic violence – bullets and blast – should it occur.

Amulet has teamed with several leading manufacturers who produce some of the world’s most beautiful furniture products.

Reception, Seating and other furnishings are now available with Amulet® Ballistic Barriers built in. Advantages include construction methods specifically designed to address bullet and blast containment while maintaining the beauty and function of the furniture.

Furniture product containing Amulet® Ballistic Barrier technology is viewed as capital equipment as they are considered a life-safety ‘device’. As such, their purchase may be tax deductible (refer to federal tax guidelines). In addition, federal, state, and local government agencies may be entitled to US Homeland Security Grant Program funds for purchase (USHSGP administered by FEMA).

Page 5 of 28
Public gathering spaces, such as hotel and corporate lobbies, are designed to be welcoming. They are also considered ‘target rich’ by security experts.

That is, they often present an opportunity to do significant harm to a great many people during an Active Shooter event. Frequently well populated, these environments challenge security professionals as they are ‘open’ and offer little physical protection to occupants should the unthinkable happen. This paradigm shifts when Amulet® Ballistic Barriers are deployed within structures common to these public spaces – ‘soft targets’ become hard.

Now, Reception Stations and Large-scale Upholstered Seating can help mitigate threats by physically protecting life from ballistic violence – bullets and blast – should it occur.

Amulet has teamed with several leading manufacturers who produce some of the world’s most beautiful furniture products. Reception, Seating and other furnishings are now available with Amulet® Ballistic Barriers built in. Advantages include construction methods specifically designed to address bullet and blast containment while maintaining the beauty of the furniture.

Furniture products containing Amulet® Ballistic Barrier technology is viewed as capital equipment as they are considered a life-safety ‘device’. Their purchase may be tax deductible (refer to federal tax guidelines). In addition, federal, state, and local government agencies may be entitled to USHSGP funds for purchase.

Amulet contract furniture products are available in a variety of configurations, fabrics, finishes, and surfaces.
AMULET RECEPTION

FRONT-LINE PROTECTION FOR THE FRONT OFFICE

Reception is where first impressions are typically made and where first contact often occurs entering a facility. Keeping front office personnel safe from harm during an Active Shooter event can be challenging, but with Amulet® Ballistic Barriers it is possible.

Reception and Information stations can now provide the same level of ballistic protection found within today’s most advanced saferooms thanks to Amulet technology. Amulet® Ballistic Barriers are thin in profile and light in weight and uniquely compatible with these structures to protect life invisibly while hidden within.

Amulet has teamed with several leading manufacturers who produce some of the most beautiful furniture products. As a result, Reception, Information and other furnishings are now available with Amulet® Ballistic Barriers built in.

There are many options:

- Add Amulet invisibly to the base of the existing stations
- Add Transparent Amulet above the worktop to protect staff while still providing visibility and conversation
- Provide Amulet in doors that are often near the entry to protect interior occupants
- Add Amulet Intercept™ ballistic detection system with an available Panic Button for staff to reach to help before the danger even enters the building

Amulet contract furniture products are available in a variety of configurations, finishes, and surface options. A furniture product containing Amulet technology also serves as a life-safety ‘device’ and viewed as capital equipment. As such, it’s purchase may also be tax deductible (refer to federal tax guidelines).
AMULET RETROFIT™ KITS

TRANSFORMING A WORKSPACE INTO A SAFE PLACE

Security protocols are designed to mitigate threats and protect life and property. Yet, even the best plans and procedures can quickly be forgotten when confronted by an Active Shooter. Human behavior often causes us to ‘freeze’ in place, or ‘duck and cover’, when faced with immediate danger.

The application of Amulet® Ballistic Barriers to the workstations, casegoods and even seating of virtually all brands and types is a new affordable security measure. Amulet technology can be found hidden within a wide range of office furniture products.

- For the existing office with an investment in workstations and casegoods, Amulet offers Amulet Retrofit™ Kits, which are affordable and easy & quick to install
- Many task chairs can be adapted with the Amulet Retrofit™ Chair Kit, a sleeve that can be slid over the top of the chair back
- When you expand for new staff, these kits can be added during initial installation

For More Information on these and other Amulet Technologies visit www.amuletbb.com or email us: info@amuletbb.com

AMULET TA™

NEXT GENERATION TRANSPARENT ARMOR
TRANSFORMING THE OFFICE ENVIRONMENT INTO A SAFEROOM

Security experts agree that saferoom access is a key component of any well thought out security plan. While these environments can help protect life during an Active Shooter event, delay in their access in a moment of panic can prove fatal. Fortunately, Amulet has an answer.

Amulet TA™ - Transparent Armor is next generation bullet and blast resistant technology specifically designed to be compatible with the commercial office environment. Ultra-light in weight and superior in clarity, Amulet TA™ maintains the aesthetic of the modern workplace by transforming glass-walled offices and conference rooms into safe-rooms capable of protecting life during an Active Shooter or blast event.

Structures common to the office environment can now also serve as a state-of-the-art saferoom that reside immediately in the occupied space.

Office personnel can now be well protected from handgun and rifle fire, as well as blast, should the unthinkable happen.

Amulet TA™ is available with a feature that provides instant concealment, transforming the glass surface from completely clear to opaque with the touch of a button – a additional security measure.

Private Office (left) and Conference Room (right) examples above.
AMULET SAFEWALL™

A Simple and Elegant Saferoom Wall Solution

Saferooms or ‘safe spaces’ designed to protect life during an Active Shooter event are fast becoming a core component of the well thought out security plan. Unfortunately, introducing them into an existing commercial environment as a means of protecting life can also prove to be an expensive and time-consuming proposition.

Intensive structural tear-downs, costly construction and significant downtime can make creating a saferoom environment a truly challenging proposition. Fortunately, Amulet Protective Technologies has a simple yet elegant solution, the Amulet Safe-Wall™.

Designed to be applied to an existing wall structure during construction or as a retrofit, the Amulet Safe-Wall System™ not only adds a beautiful aesthetic to virtually any environment, it is simple to install, which significantly reduces downtime. More importantly, while appealing on the outside, what lies beneath the surface – class leading Amulet® Ballistic Barrier protection – makes this saferoom system not only robust but truly exceptional.

It is worth noting that while there are savings to be had in time, labor, and construction costs over conventional wall structures, the Amulet Safe-Wall System™ is also available in custom configurations as well as a variety of surface and finishes. Protecting life while adding beauty to virtually any space.

AMULET INTERCEPT™ Ballistic Detection

**Speed is Life - INTERCEPT™ Indoor**

1. **AUTOMATICALLY** notifies SOC, ECC, RTCC within seconds of shots fired. Provides ballistic data, location of shooter and live video stream.

2. **AUTOMATICALLY** sends programmed threat notifications in the form of text messages and email within seconds of shots fired event.

3. Provides real time video stream of nearest camera to shooter location.

4. Can lockdown soft target areas or “geo-fence” shooter based on preprogrammed adaptive response actions.

---

**INTERCEPT™ Outdoor**

1. **AUTOMATICALLY** notifies SOC, ECC, RTCC within seconds of shots fired. Provides ballistic data, location of shooter and live video stream.

2. **AUTOMATICALLY** provides preprogrammed notifications text messages and emails within seconds of a shots fired event.

3. Provides real time video stream of nearest camera to shooter location.

4. Can combine indoor and outdoor detection and response actions seamlessly using the same server.
