

Amulet® Ballistic Barriers Quality Protocol

Amulet® Ballistic Barrier starting materials are purchased from ISO certified, United States of America, Tier 1 manufacturers. With over 100 years' experience in the ballistic industry, our technical team has the core competency to properly evaluate and implement the use of the highest quality materials on the market.

We utilize the latest chain-of-custody manufacturing methodologies. Starting with the origin of raw materials through production, testing, and delivery of a Certificate of Compliance (COC). All production product is identified and traceable back to the lot release number which will define the history, testing data, and equipment used.

Traceability is only one aspect of our Quality Control standards. Amulet® Ballistic Barriers are designed to exceed NIJ (National Institute of Justice) ballistic criteria. All testing is completed at NIJ certified ballistic labs and tested for v50 results to assure Amulet® has a built-in safety factor.
