

AMULET RETROFIT™ KITS

TRANSFORMING A WORKSPACE INTO A SAFE PLACE

Security protocols are designed to mitigate threats and protect life and property. Yet, even the best plans and procedures can quickly be forgotten when confronted by an Active Shooter. Human behavior often causes us to ‘freeze’ in place, or ‘duck and cover’, when faced with immediate danger.

The application of **Amulet® Ballistic Barriers** to the workstations, casegoods and even seating of virtually all brands and types is a new and powerful security measure. Amulet technology can be found hidden within a wide range of office furniture products.

- For the existing office with an investment in workstations and casegoods, Amulet offers **Amulet Retrofit™ Kits**, which are affordable and easy & quick to install
- Many task chairs can be adapted with the **Amulet Retrofit™ Seatback Kit**, a sleeve that can be slid over the top of most chair backs for added protection
- When you expand for new staff, kits can be added at time of installation
